Yes, my password is And diagrams with part numbers would be great too. Any help would be greatly appreciated. David R. Oakland CA Hats off to you, thanks a bunch! Even if stuff is worn out you will never know because you have no idea what your looking at and its all super clean and new looking. Unless of course your time is worth nothing. I build A LOT of engines, but pumps are just not worth it. You could do it 99.9% right and it will never start and you will waste an entire day trying to convince yourself its fuel related somewhere else. Its not, you built the pump wrong. Digital Point modules Sphinx based search Content on vvwortex.com is generated by its users. vvwortex.com is not in any way affiliated with Volkswagen AG. Traditionally, the injection pump was driven indirectly from the crankshaft by gears, chains or a toothed belt often the timing belt that also drives the camshaft. It rotates at half crankshaft speed in a conventional fourstroke diesel engine. Its timing is such that the fuel is injected only very slightly before top dead centre of that cylinders compression stroke. It is also common for the pump belt on gasoline engines to be driven directly from the camshaft. The pistons have a constant stroke volume, and injection volume i.e., throttling is controlled by rotating the cylinders against a cutoff port that aligns with a helical slot in the cylinder. When all the cylinders are rotated at once, they simultaneously vary their injection volume to produce more or less power from the engine. Inline pumps still find favour on large multicylinder engines such as those on trucks, construction plant, static engines and agricultural vehicles. It uses a single injection cylinder driven from an axial cam plate, which injects into the individual fuel lines via a rotary distribution valve. Later incarnations
