Use an optical digital cable or a coaxial digital cable, as appropriate, to connect this output to the digital input on the media center. You can purchase the required cables at a local electronics store. Connect the video output of the game console to the C composite Video IN jack. Figure 18 Game console connections Game console connection panel. Voltage variations and spikes can damage electronic components in any system. A quality suppressor can eliminate the vast majority of failures attributed to surges and may be purchased at electronics stores. Be sure to perform step 4 and play the setup DVD. The setup DVD can help you verify that you set up your system correctly for proper sound performance. Requires special remote settings. Requires special remote settings. The symbol defines the function. Control panel The media center has six buttons located on the top control panel. Playing other sources Turn on any component connected to the media center by using the remote for that component or controls on the component front panel. For that purpose, each source you use with this system has its own Settings menu with features appropriate to that source. To view the settings menus You can see the Settings menu for each source on your TV screen Figure 24 and on

the display panel of your media center Figure 25. You can use the actions above to change back to the original default settings, too. Do that if you do not like the effect of a change you have made, or accidentally made a change you did not intend. Press Exit to remove the menu from the screen. Item CD settings menu To see the CD Settings menu, press CDDVD on the remote while playing an audio CD. Then press Settings. Then press Settings. Press Exit to remove the menu from the screen. There are no separate setting menus for these sources. Movie EQ, Range Compression and Mono Decoding appear in the menu only if Audio Processing is set to User Adjustable. <http://jlicentral.com/images/authors/compaq-evo-n410c-notebook-pc-manual.xml>

If your system operates as you want it to, there may be no need for any changes. In some cases, however, changes are required to make the system fully compatible with the installation options you have chosen. You can easily find what you need in a few seconds. Retrevo has links to download PDF manuals for more than 52 Bose Home Theater Systems. Here are quick links to some popular Bose Home Theater Systems models. Connect the system with just three wires and a power cord for truly hasslefree setup. The Bose 321 GS is a progressivescan DVD home entertainment system. Bose recommends resetting the 321 GS sound system if the unit is frozen,

unresponsive or if you cannot. The amplifier was relocated to the subwoofer termed.

For certain B2B business to business IT services, however, the sales cycle is dramatically different and much time is spent directly with the prospective customer. Five big speakers. A rack of complex equipment. A tangle of wires. The new 321 GS Series II system is different. No center or rear speakers, which means no wiring to the back of your room. For the complete audiovisual entertainment experience, surround sound is a must. And the installation isn't complicated or space consuming—if you choose the right equipment. Satellite radio is another big bonus. The company's oil and gas properties and leaseholds are as follows: 1% acres in the Du Bose tract near Burkburnett, Texas; one-half interest in 2% acres adjoining the Du Bose tract. CDs, VHS tapes, and even mono TV programs, that weren't recorded in surround sound Register a free business account Please try your search again later. Half the size of the original 321 systems speakers, Boses patented Gemstone speaker array works in concert with the systems TrueSpace surround processing to deliver a spacious, multichannel presentation from just 2 visible speakers and a hideaway Acoustimass module.

Using Bose TrueSpace proprietary digital processing circuitry, the 321 GS.II system improves the sense of spaciousness imparted by stereo recordings and exciting movie effects from Dolby Digital and DTS surround encoded materials. Yet its few parts require little effort to set up, so you can enjoy your new systems performance right away it even comes with a helpful system setup and demo disc. Progressive scanning, referred to as 480p for the number of horizontal lines that compose the video image, creates a picture using twice the scan lines of a conventional DVD picture, giving you higher resolution and sharper images while eliminating nearly all motion artifacts. Proprietary Videostage 5 decoding circuitry goes beyond conventional digital technology to bring new life to old movies and music. It gives you a surround sound experience from practically any source, including older media such as videotapes, stereo CDs, even mono TV programs. Advanced postprocessing techniques automatically deliver a clear, onscreen audio center image and balanced surround sound, similar to that of a 5.1 encoded DVD. In the Bose Acoustimass module, 2 downward firing drivers give you powerful performance for the lowest audible notes and effects. And proprietary Bose technology ensures that you hear with clarity the proper balance of deep lows from all channels for music and movies. Hide the module almost anywhere, even behind furniture, and all the sound seems to come from the small cube speaker arrays. If you have other Bose hardware already in place a Wave music system, a 321 Series II DVD system, or a Lifestyle system you can hook it up to this 321 GS.II system using an optional 50 foot Bose link B connection cable to extend your entertainment to an additional listening area. You can also expand upon the 321 GS.II system later by integrating it with a Lifestyle system.

Note Bose recommends that you maintain at least 3 feet 1 meter of space between the 2 speakers with no more than 3 feet 1 meter between each speaker and the edge of your TV screen. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Fabio Arturo Penaranda 4.0 out of 5 stars Had heard it displayed in Bose store. At home, hooked to my

new home theater system, it blew me away!!!! I can't get enough of it. I have a 1400 square foot home, open floor plan and it more than fills the space. Get the dandy floor stands. The equipment even though many years old, was in good working condition. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser. All I'd like to do is send a typical signal from the preamp subwoofer output of a receiver into two of those 16 pins to get subwoofer sound from the Acoustimass woofer. I'm sure I could just run speaker wires right into the speaker wires, as I don't think that they'll pull that much power, but I'd like to make use of the Amp in the woofer if possible. This is just for fun, as I like taking things apart and just messing with them, but I wonder if this is more trouble than it's worth, though if it did work reasonably well, I'd take it to school and use it on a receiver that I have there for my kids. Thanks for any advice. If you ask someone from Bose they would tell you that it cannot work with other equipment and that it's proprietary, they won't discuss it on a technological level. If you guess wrong, it may fry or you may fry something valuable of your receiver or some such thing.

My advice, put it up for sale on Ebay with no reserve or bid set, you will at least get some change out of it. I absolutely don't recommend wasting time and possibly your equipment on this Bose Acoustimass Module. Trust me, it's the best advice you will get. Destruction has its own perks. But even if you did get it working, you would probably find that the sound quality is disappointing, extension lacking and very boomy. As Dave pointed out, even if you get it to work, you will likely be sorely disappointed with the results. You'd be better off just going out and purchasing a low priced cheap subwoofer from Best Buy or something rather than trying to employ this for use with any standard receiver, if you're just looking for something that works well enough for class. Destruction has its own perks. But even if you did get it working, you would probably find that the sound quality is disappointing, extension lacking and very boomy. Is it worth the risk of destroying good equipment with a piece of crap. I have personal experience messing up a good piece of equipment because I was tinkering around with a crappy piece of equipment. I can only recommend selling it, or taking it apart for fun. I suppose if you had a piece of junk Kenwood receiver laying around you could torture it with the Bose. All I'd like to do is send a typical signal from the preamp subwoofer output of a receiver into two of those 16 pins to get subwoofer sound from the Acoustimass woofer. Thanks for any advice. For choice of product to expend that time and energy into. All said and done, kudos for making it work for you, stay a while and we could have a nice symbiotic situation going. I purchased the front speakers of a 321 system and hooked them up to a regular surround sound stereo as my surround speakers. First off I noticed the Bose had 4 pins on each. 2 speakers are in each of the cabinets. Each speaker measures 4 ohms. In parallel that would break it down to 2 ohms. That would fry my amp.

Series would be the only way to go. I did this on both sides. I merely soldered my leads onto the pins. Voila! all is good. Bose doesn't want people using anything but Bose connected to their systems. It's why the fancy plugs and stuff. I'm using Bose 201s as my front speakers and this small 321s normally the front as my rear surround sound. Works awesome. I now want to hook up a Bose subwoofer using a Sony subwoofer now to complete my system. I know getting info from Bose on this won't be easy top secret, classified national security issues. But I will figure it out. These are powered speakers, which means I'll probably use the amp built in. I don't know if it has a built in power supply, if the inputs are normal line level or what. At worst, I will use another amp with a low pass crossover and power the speaker. Won't know much til I get them. Wish me luck. I'm sure I'll figure it out and when I'm done will post more info on this. View attachment 14594 Make sure they are wired in series and in phase. In parallel they will probably be too low of impedance and fry your amp. In phase is because you want all the speakers to push and pull together. Basically you're jumping the outnegative of one into the inpositive of the other. Then just hook the positive lead to the positive of your amp speaker outputs and the negative to the negative of your amp speaker outputs. I purchased

the front speakers of a 321 system and hooked them up to a regular surround sound stereo as my surround speakers. Wish me luck. Im sure Ill figure it out and when Im done will post more info on this.Thanks! Chad Ive messed around with so many things that now I can take almost anything apart with confidence and read a repair manual. New fridge, washer, stove, furnace.nope, not today. Ive messed around with so many things that now I can take almost anything apart with confidence and read a repair manual. New fridge, washer, stove, furnace.nope, not today.

I should start by saying that I am not a great audiophile by any stretch, but like kucor88 and other's here I do get distinct pleasure out of making what I have work, before necessarily running out to buy the latest and greatest. I am running these Control 25t's currently directly from the amp's second channel, partly because of curiosity on how they would sound together with the Bose system and partly because of how they fit in the room itself and while I imagine there is likely any number of different ways to lay this out I was curious how these two direct JBL speakers would complement the system as a whole, hoping I guess they would help fill areas cut or phased out by the more strictly controlled Bose satellites. What I found is actual quite opposite. The JBL's hooked up directly the amp as they are now do not sound great even with what I expect is a reasonably fair crossover built within their own little enclosures and seem to be struggling with the presumably wider host of frequencies they are now being asked to produce without any other form of frequency cutting or tweaking. Obviously everything would be wired up through the Acoustimass sub unit, as per normal, but I wonder how best to setup the JBL Control 25t's to cope with this arrangement. What Wattage setting I may want to invoke and if I should possibly do anything with the internal transformer or crossover mechanism likely already inside the Control 25t's now in doing so. I tried to find information about that and i see your web. I want to ask you if its possible to do it, in ps321 series 3. Thanks in advance. Sorry for my english. The one mine uses is the square, 15pin connection. Im just wondering if anyone is able to clarify his work, or provide a better translated explanation. Thanks in advance I agree with that. Like its predecessor, the Series II uses signal processing to give the. Popular Posts. You'll find that if you refer to the phase diagram for chemical X your testimony has to be truthful and accurate so as to obtain a favorable verdict in a trial for infringement of a patent. As you research the phase diagram for compound X there are numerous measures that might be considered as the purpose of some other step in a way that doesn't match its legal description. You'll want to consider these aspects and ways to be certain that you fully address them before going ahead and talking about your own personal experience. The first aspect which you ought to consider as you discuss the question of referring to the phase diagram for compound X under is that you shouldn't describe the entire building process as being completely mechanical.

It's correct that there are numerous measures that will require the use of mechanical energy as a means of production, but it's important to see there are different procedures that can also be used in order to finish the procedure. Should come from your own observations of this construction process as you introduce it to the prosecution. After all, you're the person who can describe the building process in the manner that best fits your testimony as you're under oath during a trial for infringement of a patent. You should rather take care to describe to the jury that the building process is an action that uses a combination of mechanical energy as a way of creation. If you do refer to the phase diagram for compound X below and you describe that a construction procedure involves the use of mechanical power as a method of creation, it is important that you understand

that you will have to preserve the valid description of the activity so as to have a successful outcome for your situation. You will have to ensure you safeguard your invoices from getting the result of confusing the jury. In regards to the phase diagram for chemical X below, you are going to want to keep the detailed outline of how a building procedure is done by using a blend of mechanical energy and form.
