# boss audio mr800 manual

Ask your question here. Provide a clear and comprehensive description of the issue and your question. The more detail you provide for your issue and question, the easier it will be for other Boss Audio Systems Marine MR800 owners to properly answer your question. Ask a question About the Boss Audio Systems Marine MR800 This manual comes under the category Receivers and has been rated by 1 people with an average of a 5.1. This manual is available in the following languages English. Do you have a question about the Boss Audio Systems Marine MR800 or do you need help. Ask your question here Boss Audio Systems Marine MR800 specifications Brand The distance between the two devices that exchange data can in most cases be no more than ten metres. When the volume exceeds 120 decibels, direct damage can even occur. The chance of hearing damage depends on the listening frequency and duration. An HDMI cable is used to transport audio and video signals between devices. Dust in hardto reach places is best removed with compressed air. This makes it possible to create a 5.1 effect with only 1 speaker. ManualSearcher.com ensures that you will find the manual you are looking for in no time. Our database contains more than 1 million PDF manuals from more than 10,000 brands. Every day we add the latest manuals so that you will always find the product you are looking for. Its very simple just type the brand name and the type of product in the search bar and you can instantly view the manual of your choice online for free. ManualSearcher. com If you continue to use this site we will assume that you are happy with it. Read more Ok. This amp can comfortably power speakers or subwoofers with all channels being used at a load of 2 ohms. For instance, on a 4 channel amp, channels 1 and 2 could be used normally for your speakers, and channels 3 and 4 can be bridged for more power to a single subwoofer. A 2 channel amp can also be bridged to power a single subwoofer. <http://estudiowebcolombia.com/userfiles/corvair-conversion-manual.xml>

We have developed a specific linear circuitry that further reduces distortion while increasing both sound quality and power output. We integrate hightech, stateoftheart waterproofing materials plus special UV coatings for plastic surfaces, coated circuit boards and connections to protect the product against the harsh outdoor elements and resist corrosion. Highlevel speaker level inputs accept the signal from the speakers, while lowlevel RCA inputs accept the signal from the preamp outputs of the source unit. MOSFETs are used either as a switch or to amplify a signal. MOSFETs are superior to other FETs, because they require less current to operate, which makes them better suited for car audio. To much gain will lead to distortion and to little will lead to clipping. All manuals on ManualsCat.com can be viewed completely free of charge. Customize the sound with Fixed High Pass Crossover, Variable Low Pass Crossover, Bass Boost and Remote Subwoofer Control. Bridge channels for more power and flexibility. The MR800 Amplifier features a unique rubber door, which tightly seals all control panel openings and weatherproof connectors to prevent corrosion and provide protection against the elements. For instance, if an amplifier has 4 gauge power and ground terminals, use high quality 4 gauge multistrand copper wire to make your power connections. This maximizes the amplifier's ability to draw the required power upon demand. This also helps prevent overheating that could cause failure. ALWAYS make sure your vehicle's electrical system is capable of handling the current demands from any aftermarket accessory. Connect the amplifier's power ground terminal to the closest point on the chassis of the car. Use 4gauge or heavier wire. Scrape any paint away, use a star washer to "bite" into the metal and secure it tightly using a grounding lug. A different type of fuse or rating may result in damage or cause a fire. Please refer to your owner's manual for reference on fuse size and type. A fused distribution block is recommended when using several amplifiers or accessories. This setting allows users to match the gain from the source unit. In other words, make sure Bass, Treble, and Subwoofer levels are set to "0" on your source unit before adjusting the gain or input sensitivity selector on your amplifier. Customize the sound with Fixed High Pass Crossover, Variable Low Pass Crossover and Bass Boost. Turn up the Bass and feel the vibes with the Remote Subwoofer Control. Bridge channels for more power and flexibility. The MR800 Amplifier features a unique rubber door, which tightly seals all control panel openings and weatherproof connectors to prevent corrosion and provide protection against the elements. Surf your playlists with the Boss Audio MR800. For further product details, please scroll down.

Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Westin S 5.0 out of 5 stars I put 6 of these in my boat hooked up 2 per channel on an 800 watt 4 channel amp and they sound amazing. Running about 100 watts RMS per speaker. They're loud and clear. The lights are bright and light up the whole boat like a dance floor. Only installed for 1 day so if they give me any trouble I'll update my review but for now I'm quite satisfied. Fraction of the cost of the kickers! Sure would've been nice to know before I bought 2 pair to put in my golf cart!! This being said, I don't believe they cannot be synced together. There must be a way. I have the RGB cables to sync a pair together, but no connections to sync 2 pair together. PLEASE help me resolve this issue. As they sit right now, I have to disconnect the battery to even turn the lights off, because every time I turn the LEDs off on one pair of speakers, the other pair lights up. SO FRUSTRATING!!! Fun and sound great.! I used the speakers with the BOSS Audio MGR350B Bluetooth Marine Radio. They are really bright at night and you can dim them as well. Plenty of wire for my boat. I was scared to cut into my hull, but I watched some online videos and gave it a try. SO GLAD I DID!!! NOTE after a few months of use in salt water, I have noticed a couple of the screws are starting to rust. Quality of the speakers are great and sound is pretty good, better than stock. Install was time consuming due to the speakers are way bigger than the stock speakers which I knew I was going to have to do some modification. I had ordered a 1" thick cutting board to make the extra 1" depth space needed in the speaker housing for these to fit.

The speaker holes did not match the mounting holes of the speaker housing which was fine since I added the spacer and just screwed the speakers to the spacer after I mounted the spacers to the speaker housing. Love that they are marine speakers so they should stand to the elements. For the power source I just spliced the power in with the cigarette port wiring in the tour pack. Overall I'm

very satisfied with the purchase and quality of these speakers. So when you go RVING you don't need excellent sound but these were very good for the money. When things go wrong you find out how good a company is. I did have an issue with one speaker and they set me out a new pair right away. For the money these are very good quality and from a good company. This Boss model is an upgrade to the 2CH amp I had before. It's for my boat. Well written instructions, was easy to splice into my existing wiring and with the 4 speakers now on their own channels the sound is so much better. I adjusted the settings just fine, however it would have been nice if the instructions covered all of the features the amp has. All in all, very pleased with the quality. The Boss 800w amp performs flawlessly and makes those 2 speakers fill the boat with music. I can play my stereo at full volume, as loud as it can go, and the sound is perfect. No distortion whatsoever. It's absolutely amazing!! I also complimented this system with an 800w selfpowered sub. Thrilled with the performance of this Boss 800w amp!!! I'm happy with them but they are a cheaper speaker that you pay more for because of the lights in them. So far there doing the trick and the lights are fun for the kids at night. Sorry, we failed to record your vote. Please try again. The remote is a bit too tiny and can easily be lost. Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. Please try again. *Tres beau son avec de bonnes graves. Beau jeu de lumieres.*

*Jaime beaucoup surtout pour le prix car je les ai gu et presquachete en magasin pour plus chers.* Sorry, we failed to record your vote. Please try again. Have them in our bass boat. they sound great. Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. Please try again. Sorry, we failed to record your vote. 0 out of 5 stars The Boss 800w amp performs flawlessly and makes those 2 speakers fill the boat with music. I can play my stereo at full volume, as loud as it can go, and the sound is perfect. No distortion whatsoever. It's absolutely amazing!! I also complimented this system with an 800w selfpowered sub. Thrilled with the performance of this Boss 800w amp!!!Please try again later. We really appreciate you taking the time to share your experience with us. We count ourselves lucky to have customers like you and we look forward to working with you again in the future. If you have questions, we welcome you to contact our support team.Please try again later. Hank 2.0 out of 5 stars It definitely loses a lot as one starts adding speakers, not sure it really puts out what it says it does. It heats up really easily at moderate volumes, and now, with about 2 years of use on it, it is dead.Please try again later. Please try again later. Laura 5.0 out of 5 stars Spent a little extra on these and I am glad I did. These really sound good. I was going to do an amp with them but glad i decided to wait as its really not needed. Great base, for smaller speakers. And the LEDs are actually pretty cool. These look awesome in my boat and sound great too, whats not to likePlease try again later. Please try again later.
