Please pardon our dust as we upgrade not all website features are functional yet. This technology is enormously beneficial, preventing accidents, helping with parallel parking, and more. When it goes out, you're left with one less tool in your safe driving toolbox. We're going to help you out, answering common backup camera problems FAQ style. Let's go! Especially when it comes to solving problems with your backup camera, the first thing you have to determine is how much control you're realistically going to have over fixing the problem. If your backup camera problems seem a bit too overwhelming or out of your skillset, talk to a mechanic to get help. If it's beyond the obvious, then here's a handy guide that walks you through many common electrical problems and gives you the tools necessary to troubleshoot an electrical problem. But first, to get the obvious troubleshooting steps out of the way, put your car in reverse. What does the display say "No signal" Or is it just black. Do you have black and white visual noise. Depending on the answers to those questions, you'll probably find your answer below.

That said, the distance from basic issue to easy fix and then onto finding out your camera has bit the dust can be pretty short. If it's a wifi camera, and it was working previously, it likely means that the camera or the display needs a reset. You can check out some of our thoughts about wired vs wireless backup cameras here It also wouldn't hurt to check your fuses and the power cables for the camera usually located behind the trunk panel of your car. Possibly, a fuse may have blown or a wire may have frayed and become disconnected. This is probably the best case scenario with these kinds of issues. Again, checking your fuses to ensure everything is connected and not blown and going and tracing the wiring and cables from the camera to the display will reveal the problem to you. If your display is embedded in the dashboard, start at the camera and work to the display, as removing a dashboard display can be a difficult process, and you only want to do it as a last resort. Make sure all of the cables and connections in your backup camera system are fully connected and repair any damage. If your display is not powering on at all, it's likely a problem with the display, not the camera, so check the wiring diagrams for your car. If you installed the monitor yourself, double check your work. Plugging the camera into the AUX dash cable rather than video feed is a common problem with home installs. . More likely than not, if your display is not powering on, it's either improperly connected make sure that you've got the right level of power being sent to the display or the monitor is damaged or broken. I'll also add since it has come up before, that many people install their backup camera to only work when the car is in reverse, so make sure you've actually given reversing a go. Check it for damage, and replace it if necessary. Camera Source sells a wide variety of backup cameras and other camera products.

We can match you with the right camera for your vehicle, be it commercial or for personal use.

We are your Hyundai custom fit vehicle wiring experts, and offer a lowest price guarantee. We are your Hyundai custom fit vehicle wiring experts, and offer a lowest price guarantee. Since May 2018, drivers of passenger vehicles were asked to install a backup camera for safety and security reasons. Buying a backup camera is not a very cumbersome process. Think of it like buying a travel camera, but for your car. Since the compulsory law came into effect, the market has been flooded with various options for rearview cameras. It's easy to get confused due to the sheer volume of options. Consider this article a helpful guide for choosing the best backup camera for your vehicle. Below you will find detailed reviews of top backup cameras along with tips for purchasing a good product.

TOPTIERPRO Upgraded Mini Backup Camera Guide to Buying the Best Backup Camera Decide between a Backup Camera and a Camera Kit Check Vehicle Model Compatibility Don't Buy Based on Installation Mind Those Wide Angles Do You Need Distance Guidelines. Pay Attention to Mounting the Camera Resolution Must be Supported by the Monitor IR Vs. LED Lights for Night Vision Features to Consider in Good Backup Cameras New vehicle owners may already have a camera installed in their cars. But those with older car models may want to buy something new. Even if you already have an inbuilt backup camera in your car, a new reverse camera may improve upon the factory settings. You don't have to worry about ISO, optical zoom, and similar features when buying a vehicle backup camera. However, just to be on the safe side, make sure your vehicle model can support the camera you plan on buying. You should decide how much you are willing to spend. Set a budget and then shop for a product. But keep in mind that just because a backup camera comes with a threedigit price tag, that doesn't necessarily make it good. The camera or its mounting bracket should not obscure your license plate. The viewing angle is a very important factor to consider if you drive a large vehicle. The backup camera should have either infrared light bulbs or LED lights to illuminate images when daylight is low. When you make your final decision, take all of the above factors into consideration. If you want more pointers for making a great purchase, we have compiled a buyer's guide under the reviews. Top 10 Best Backup Cameras 2020 1. Chuanganzhuo Backup Camera and Monitor Kit For Car View on Amazon Check For Coupons With Wikibuy Its Free. Why we like it This backup camera is superbly affordable and brimming with cool features like waterproofness and infrared vision. You can buy the Chuanganzhuo backup camera for the same price as two or three large pizzas.

Editor's Rating Design This camera comes in a kit with power cables and a monitor. The TFT LCF monitor is 4.3 inches in size. It can manage a native resolution of 480 x 272. The monitor supports a display ratio of 169 or 43. This is a 12V rated camera. The camera kit comes with two video signal input options. You can switch between AV1 and AV2 depending on reversing priority. The signal format for the camera is NTSC. The camera attaches to the license plate. It has a CMOS PC7070 image sensor. There are 7 infrared lights to support night vision. Video output is 1.0vpp,750hm via an RCA connector. This camera is IP67 waterproof. Performance This camera kit is designed to eliminate blind spots when reversing. The kit attaches to the license plate for optimal reversing view. If your vehicle has a hitch, you will be able to see it using this camera. Performance can vary depending on different types of vehicles. But in general, this camera delivers acceptably clear images. The LCD screen isn't Full HD, but the picture quality is decent enough given the price. The camera has infrared light to support night vision, but it doesn't really work as advertised. Don't expect superior night vision. The reversing camera is light sensitive and it may work during dusk, but the footage will be quite dark in the night. It's IP67 waterproof, which means the camera will be protected from powerful jets of water issued from all directions. It can withstand rain and the car wash, but it won't survive if the camera is somehow immersed in water. The camera connects to the light bulb in the rear end of the vehicle. The kit comes with a power cable about 5 ft long to connect the backup camera. You need to have a 12V wire running from the battery to the bulb to turn this

backup camera on. In some vehicles, this might be a bit tricky to install. The camera is easy to adjust up or down to capture reversing images the best.

The two video inputs are very helpful too because one is dedicated to video and the other is the AUX input. One feature to gripe about is the display, which only shows the cam feed when the vehicle is in the reversing mode with the rearview lights turned on. You will have to draw another wire to perpetually power the camera to see the feed anytime. Overall This camera has a bunch of necessary features—some waterproofing and night vision—that drivers can rely on. It offers an excellent cost to benefit ratio and topnotch performance. It may not be perfect as some features can definitely be better. But the performance isn't so bad considering some higherpriced camera work the same too.

Pros Decent resolution Two video inputs IP67 waterproof Infrared night vision available Comes with LCD monitor Adjustable Cons Waterproofing is limited Night vision can be grainy and dark Only turns on when the backup lights are on 2. Esky License Plate Backup Camera View on Amazon Check For Coupons With Wikibuy Its Free. Why we like it This backup camera comes with a sturdy and stylish license plate. Save money on two car items at once. Most backup cameras have to be installed onto the license plate or the rear part of the vehicle. The Esky already comes attached to a license plate. You can get rid of the old plates and enjoy this 2in1 license plate plus reverse camera.

Editor's Rating Design The backup camera is attached to a heavyduty license plate. The plates are chrome plated to look stylish and be corrosionfree. The camera is equipped with a macro lens with a 170degree viewing angle. Inside is a CMOS PC1030 image sensor with high color sensitivity. The camera is IP67 waterproof. It has 8 infrared LED lights for night vision. There are builtin scale lines for the camera with a trapezoid electronic ruler to measure actual distance. The camera receives NTSC signals and has a resolution of 510 x 496 pixels. It consumes 60mA power but the power output is 12V.

Performance It's impressive how thoughtfully this backup camera has been designed. It's possible one of the best backup camera license plate frame combos you can buy. The license plate should fit any vehicle that can accommodate a standard U.S. license plate. The plate is highly durable thanks to the chrome exterior. This camera is physically adjustable to suit your driving needs. It displays color really well, even at night. Keep in mind that this is an NTSC camera, so the video screen will have to be NTSC as well. The camera feed you get is highly informative, thanks to the builtin scale lines, so you can get a pretty good idea about distance when reversing. Installation may take some time though. The power cable of the camera has to be connected to the wires of the tail lights. Then the RCA output has to be connected to the monitor. The reverse gear shift controls the camera. So it only turns on when the vehicle is in reverse mode. This camera is waterproof to a certain extent. The sealing has to be intact to prevent water from seeping into the camera. The overall image quality of the camera can be a bit grainy. If you want clearer images, remove the blue protective film on the lens. For safety reasons, you might want to consider replacing it with a clear protective film. Overall The downsides of this camera are really negligible given the super affordable price range. It has a really good angle and is highly color accurate. This is one of the cheapest cameras that work well in lowlight conditions. Image quality is so-so, but that's expected for this price range. It's a great buy that relatively easy to install. It's hard to find a better bargain for this price range.

Pros Good viewing angle Adjustable camera Durable license plate frame IP67 waterproof camera High color accuracy Great images in low light Cons Image resolution is mediocre Turns on only when the vehicle is in reverse May require a mechanic to install 3.

eRapta ERT01 2nd Generation Car Rear View Reversing Backup Camera View on Amazon Check For Coupons With Wikibuy Its Free. Why we like it This backup camera is supremely affordable and has a wonderful viewing angle. The eRapta ERT01 is a backup camera that you can install on the license plate of your car. It doesn't come with its own license plate frame, but it does have an attachment strip. This backup camera is deceptively cheap.

Editor's Rating Design This car backup camera

comes with an adjustable lens. The lens delivers a 149-degree viewing angle for perfect vision when parking the car. The camera is compatible with 12 to 24V DC power outlets. The camera wire is 8m long and is made with high purity copper. The camera is IP69 waterproof. The sensor has a rubber ring made from resin to increase the waterproofness of the gadget. The camera has an LED lighting system that automatically activates at night. It has an automatic backup too. Performance It's hard to believe the cheap price tag on this reversing camera because the images it produces are so clear. The angle is adjustable, so any vehicle of any height can perfectly set up the camera to capture the best footage. A word of caution though this is not a plug and play camera. It will have to be carefully installed and some drivers would require assistance from a car mechanic. It attaches to the top of the license plate frame. Be careful when installing because it may cover parts of the license plate. It's IP69 waterproof. The standard means that the camera is dust tight and can withstand high-pressure water jets. Another big advantage is that the camera comes with assist guidelines. It's superconvenient when driving in low light conditions. Plus, it comes with a 2-year factory warranty. The brand offers lifetime support so it's really easy to get replacement parts if needed. Overall This camera may not be packed with fancy features, but it's got all the essentials covered.

The viewing angle is really golden for reversing under any circumstance. It has decent picture quality, certainly more than you can ask for given the price. Assist guidelines and high waterproof mark makes this really worth every penny. If you are looking for the best reversing camera kit, this product is certainly worth considering. The kit doesn't just include a camera, it comes with a monitor and multiple video inputs. The product is really reliable even at this price range. Editor's Rating Design The LeeKooLuu backup camera kit includes a rearview camera and a video monitor for the dash. The rearview camera has an HD 7080 image sensor. The monitor has a 4.3-inch LCD display. The monitor resolution is 480 x 272. The rearview camera can support resolutions up to 600 pixels. The monitor is compatible with all signal formats, PAL and NTSC included. The monitor is 9V to 35V. The camera is 9V to 14V. Both the monitor and the rearview camera meet FCC, CE, UL, and RoHS standards. Both also have waterproof grading. The package includes 2 power cables. A video cable is additionally included. Performance The biggest advantage of this backup camera kit is that the monitor supports two video formats. That means you can connect two rearview cameras to the monitor. If your vehicle already has a factory backup camera, this kit would be ideal to add an extra one. It's ideal for large vehicles like trailer and trucks that need a massive rear viewing angle. The camera is IP68 waterproof, which is a decent grade. The waterproof grading for the monitor isn't specified, but it is dust tight. Other perks include low power consumptions of the monitor. It's energy efficient, mainly to prevent overheating, especially when connected to two cameras. The camera has 7 LED lights to enhance lowlight viewing conditions. There are no infrared viewing capabilities, however. The monitor can be a bit of a hassle to mount on the dash.

It comes with an adhesive to stick to the dash, but you can also alternatively use a suction cup. The compact size of the screen is a major advantage too. It won't obstruct the front driving view. Downsides are really minimal. Installation can be a bit complicated because of the two video inputs. The backup camera could be more adjustable too. Overall This is really a bargain product that you can use to install two backup cameras in your vehicle. Costwise it offers amazing perks with minimal downsides. Pros Monitor supports two cameras Compact monitor won't obstruct driving view LED night lights in camera Waterproof camera Monitor is dustproof Very affordable Low power consumption Cons Installation is difficult Camera not adjustable May be difficult to install the monitor on the dash 5. AUTOVOX M1W Wireless Backup Camera Kit View on Amazon Why we like it this camera kit comes with a wireless transmitter, eliminating any need to install the backup camera with wires. The camera kit is on the expensive end. It would set you back about a 100 bucks. But in return, you will get a great camera, a monitor, and a transmitter. Most backup cameras are really designed for SUVs and cars. This one is highly suitable for large vehicles like trailers and trucks as well thanks to a large viewing angle. Editor's Rating Design The backup camera kit includes a

wireless transmitter, a 4.3inch LCD screen, and a reversing camera attached to a mount. The camera connects to the monitor via the transmitter. Therefore, no power cables are necessary. The transmitter is IP67 waterproof so it can be installed anywhere. The transmitter has to be installed near the reversing light. The camera can deliver s highres image within a 100m distance. It has 6 LED lights with 26 lumens each. The camera has a highdef image processor inside. It's IP68 waterproof on the outside. The car monitor comes with an adhesive silicone bracket mount. The suction pad is reusable.

Performance Most backup cameras are quite complicated to install, largely because of the wire connecting the camera to the monitor. But this camera kit has its own waterproof wireless transmitter, so video cabling drawing is not necessary at all. The rear view camera delivers an excellent, highres image most of the time. The LED lights turn on automatically and can adjust the lights depending on the light condition. The night vision is really superior thanks to these lights. The monitor can be installed on to the windshield or the dashboard. The silicone mount is adhesive. But if it gathers dust over time, you can wash it and reuse it as a suction cup. Expect the overall installation to take about 30 minutes to an hour. There's no need to drill holes to install brackets. The bracket for the backup camera will be partially hidden within the license plate frame. So it won't obscure any part of the license plate. The camera kit has parking guide lights on the monitor. A little green light will appear when parking as a guide. Another big advantage is the fish eye lens of the camera. It really shows a large swath of the area behind the vehicle. The kit has an extra USB port for charging a DVR and a mobile device at the same time. The camera is flexible and can be hidden using a 3M sticker. If there's a downside, it's the lack of a 12V DC power adapter filter. The mounts can be a bit generic too, though very useful. The unit also has a tiny buffer time. Some drivers may find that it takes a fraction of a second longer to turn on in reverse mode. Another issue is that, because of the wireless transmission, the picture quality may not always be steady. But it does look great when steady. Overall This reverse camera kit may be on the expensive side, but it's really worth checking out. The kit is easy to install and has a large field of view. The wireless transmission eliminates video cables. It has its perks and downsides.
